

# Government Success Stories from Cherry

## Project

Spanish e-Health card

## Problem

The replacement of mag stripe-based existing Spanish e-Health cards by a new one which is a smart card leads to a long transition time where combined readers are needed.

## Solution

G81-8040 combines the three main requirements:

- robust durable keyboard ( FTSC )
- magnetic card reader
- smartcard reader from top

## Result

Cherry is the only manufacturer who can supply such a solution. It is widely used now in hospitals, insurance companies and health administration.
